

Tadiran Introduces New Line Of Advanced IP Phones

Tadiran Telecom is proud to announce the general release of our new line of advanced IP Phones. The Tadiran-branded Polycom telephones represent the latest in IP telephone technology including Polycom's HD Voice, which offers twice the clarity of ordinary phone calls for life-like, vibrant conversations.

The P-Series family of IP phones leverages the capabilities of SIP-based VoIP networks to deliver breakthrough voice quality and advanced features that make calls more efficient and productive. All models support Power over Ethernet (POE), have backlit displays, and are desi-less. There are also options for a color and touch screen displays, 1 Gig Ethernet switching, and video capabilities.

A migration path is available to many existing customers to leverage these new telephones and benefit from complete UC desktop functionality. Tadiran customers will now enjoy new capabilities on both existing and new Tadiran systems. Tadiran and Polycom have a longstanding relationship, having teamed to deliver DECT wireless solutions since 2007.
