

Tadiran Telecom Wins Another Tender to Provide Communication Solutions to World's Biggest Subway

Petach Tikva, Israel, Plainview, NY– January 6, 2011 - Tadiran Telecom®, a leading global IP business telephony and communications supplier, announced today that its advanced communications solutions have been chosen again for Subway 8, part of the Beijing Subway's continuing expansion plan.

What makes this project unique, even with our vast history with the Chinese Subways, is that the Coral systems were chosen for both the administrative AND dispatch requirements of subway line 8. In addition to the benefits listed below, the choice of the Coral for both necessities enables the customer to train the employees ONCE and keep less spare equipment which will save them money today and in the future.

Tadiran Telecom solutions are already providing mission-critical communications to much of Beijing's public transportation including the Beijing Subway Lines 4, 5, and 15, the Airport Express subway line, the Beijing Airport Command Center, the Yizhuang Line, and the Daxing Subway. Due to the successful installations, Tadiran Telecom has been chosen again over competition from major players. Line 8 is the seventh line awarded in the Beijing subway to KTT, Tadiran's subsidiary in China.

Tadiran's telephony solutions have already been deployed in other transportation projects in China, including Dalian International, Hohhot, Tianjin, Wuhan, Zhenzhou, Hainan Phoenix and Wuxi airports and Internal Metro Express in Beijing airport. In the past 2 years alone Tadiran Telecom's network solutions have been successfully deployed in scores of projects worldwide such as the Minsk subway, Ireland's Transport 21 project and more. Tadiran Telecom also provides IP communication for other vertical markets, including emergency services, healthcare, energy, education and government.

About Tadiran Telecom
