ClearSight Networks and Tadiran Telecom Partner to Offer Holistic VoIP Solution

Combined Vendor Solutions Enhance and Simplify VoIP Deployments

ClearSight Networks, the leading provider of network monitoring and analysis tools for real-time application and network troubleshooting, and Tadiran Telecom, a technology leader in IP telephony, today launched a global partnership as a part of the Tadiran America national sales meeting. The partnership enables Tadiran Telecom and their resellers the ability to offer ClearSight Networks' full solution of network assessment and troubleshooting tools to customers that wish to migrate to a complete, converged VoIP network.

Organizations are facing the challenge of integrating data networks with voice network features to enhance communications. With lower costs and increased clarity and efficiency, VoIP is a viable business solution, but is not one without problems. Implementation may include complicated rollouts and integration with legacy systems. When combined with day-to-day applications, issues like jitter and latency make it imperative that IT administrators have a clear understanding and real-time insight into VoIP applications and their impact on existing networks in order to improve and maintain overall Quality of Service (QoS).

"We evaluated many VoIP tool providers and ClearSight Analyzer was by far the best choice due to the clarity of graphical representations of converged network levels and real-time application monitoring," said Thomas Grinde, vice president of sales, Tadiran America. "The ClearSight Analyzer is simple to deploy and easy to use, making it the ideal tool for IT administrators that are not as familiar with VoIP applications to understand where communication problems exist. Ensuring the best quality of service is imperative for customer satisfaction and quality issues are easily remedied using ClearSight Analyzer."

Selected as the recipient of the Clear Choice award for VoIP analysis tools by Network World magazine, ClearSight's strengths are its ability to easily visualize problems at the application layer and in real-time, enabling IT administrators and application managers to easily and immediately visualize and pinpoint the source of VoIP issues. Unlike most network analysis tools, the ClearSight Analyzer has always supported VoIP as part of its core feature set. The product now incorporates two new major protocols, MGCP and MEGACO, adding to their industry leading support for SIP and H.323. ClearSight also maintains the industry's broadest voice and video CODEC support, furthering its ability to reconstruct VoIP content in real-time and in post-analysis mode.

Tadiran VoIP solutions include advanced software applications that transform any PC into a full-featured IP telecom device. The company offers Coral IPx IP-enabled servers that are open and flexible systems, designed to allow their customers to build upon existing communications investments. The Tadiran solution enables universal connectivity and end-to-end IP networking that allows organizations to evolve to a converged network by adding capacity and capabilities at their own pace.

Together, ClearSight and Tadiran's solutions enable network and application professionals to effectively implement and manage an advanced VoIP system. The combined offering is an ideal solution for companies with distributed offices and enterprises that demand an in-depth understanding of their digital communications networks.

"This is a strategic partnership of two companies that share the same high standards for quality and innovation," said Hartmut Marschall, regional sales manager, ClearSight Networks. "Tadiran's scaleable Coral line of IP-enabled communications products is well-matched with ClearSight's real-time VoIP monitoring and analysis capabilities and thus is the ultimate solution for maintaining proactive control over the converged network."

Pricing and Availability

Tadiran will sell the ClearSight product line through their Tadiran America Business Partner channel. ClearSight and Tadiran America are offering these resellers two *not-for-resell* licenses at a reduced price to be used as pre-assessment tools. Tadiran Business Partner will also sell the ClearSight to their client base.

About Tadiran America

An established innovator in telecommunications for more than 40 years, Tadiran America is leading the convergence of today's technology with tomorrow's innovations, transforming the way people and businesses communicate, connect and collaborate. Tadiran's IP-enabled solutions support voice, data and video and advanced networking applications. Tadiran America is a division of Tadiran Telecom which distributes IP communications solutions in 41 countries.

About ClearSight Networks

ClearSight Networks is the preeminent provider of next generation network monitoring and analysis tools for real-time application troubleshooting. The ClearSight Analyzer product line provides IT administrators with a view of application flows in real time. Quick analysis and effective troubleshooting is enhanced by reconstructing application conversations in the same interface experienced by end-users. ClearSight Networks was founded in early 2001 and has received numerous awards for product ingenuity and creativity. Headquartered in Fremont, California, ClearSight Networks can be reached at (800) 825-7563 or www.clearsightnet.com.
