Red Sea softswitch links PBXs into a single distributed system.

VoiceCon Spring 2006 – Orlando, Florida

Tadiran America this week demonstrated the second generation of its softswitch "Red Sea" at the VoiceCon Spring conference in Orlando Florida. Enterprise-users, Value-added resellers (VARs), and network carriers were all in attendance. The Linux-based Red Sea is the newest in a long line of Tadiran Telecom communications solutions.

The Tadiran solution has two crucial components for VoIP. First is the development of the new Red Sea softswitch. Second is continued development of VoIP support in the Coral IP-PBX systems. Tadiran now has complete SIP support within the Coral IPx series. These Coral IPx (or FlexiCom) systems are installed in thousands of locations. Not only can these systems now be upgraded to support Session Initiation Protocol (SIP) devices, but they can be upgraded and linked to the new Red Sea server. This creates a "distributed" system which provides enterprises (who have several sites with existing Coral systems) an upgrade path with better centralized management and all the next generation features.

The Red Sea is distinctly different than traditional PBX systems as it is "user" oriented versus "extension and line" oriented. A user may have many devices such as a desk phone, wireless device, PC with video, and voice messaging box-all of which can be a part of a user's profile within the Red Sea. This creates a seamless user experience for communication.

Coral IPx systems will continue to be a logical gateway with connectivity solutions within small and large organizations alike. Red Sea servers can be implemented anywhere and are designed to scale to support large enterprises. Although the Red Sea can use Coral IPx systems as gateways, the Red Sea will work equally well with other popular network components.

About Tadiran America

An established innovator in telecommunications for more than 40 years, Tadiran America is leading the convergence of today's technology with tomorrow's innovations, transforming the way people and businesses communicate, connect and collaborate. Tadiran's IP-enabled solutions support voice, data, video and advanced networking applications. Tadiran America is a division of Tadiran Telecom which distributes IP communications solutions in 41 countries. More information is available at www.tadiranamerica.com.
