Unified Communications productivity
tools for today's business

CORAL NAVIGATOR

All Your Communications in a Single Place

Today's users need a single place to manage telephone numbers and communications inside and outside the office.

Tadiran Telecom's productivity tool - Coral Navigator is a complete unified communications tool designed to enhance the user experience and increase communication efficiency.

Using familiar Outlook®-like tools, it provides users with an intuitive interface for getting the most from the Coral IPx communications platform. No more searching for internal extension numbers in one place while external contacts are stored elsewhere. Navigator provides the presence (or current status) of other users. Calling them, creating a conference, sending an instant message, or sending text to their telephone's display is just a click away.

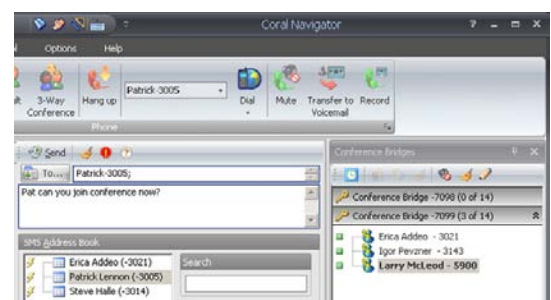

Navigator also improves your ability to manage inbound communications with rules, profiles, and buddy lists. Getting the most of your telephone system's features and creating more efficient communications is exactly what the Navigator will do for all your users.

- ✓ Increase user-productivity
- ✓ Simplifies conferencing and conference-bridge use
- ✓ Main screen shows busy status of all users
- ✓ Run as toolbar or full screen
- ✓ Screen-pops for instant messages or phone calls
- ✓ Record calls from desktop or even from cell phone (using FlexiCall)

CONTACTS – This window allows you to manage your Outlook contacts, the complete telephone system directory, and personal telephone lists in a single place. Quickly find a name by typing a few characters into the “search” window.

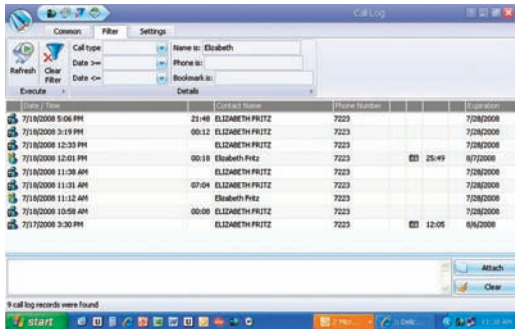

INSTANT MESSAGING – A secure “internal only” additional messaging service allows users on the system to communicate with text. This is an especially useful way of unobtrusively asking a question to a co-worker while they are on a call.

CONFERENCE BRIDGE – Tadiran Coral IPx systems feature “meet me” conference facilities. Callers simply dial the four-digit bridge number (or are transferred) and automatically enter a meeting place for many callers. With Coral Navigator the participants can be viewed, muted or removed via a mouse click. This visual representation of who is currently on the bridge confirms each participant. Planning and scheduling tools for conference bridge resources (including email invites) are also provided.

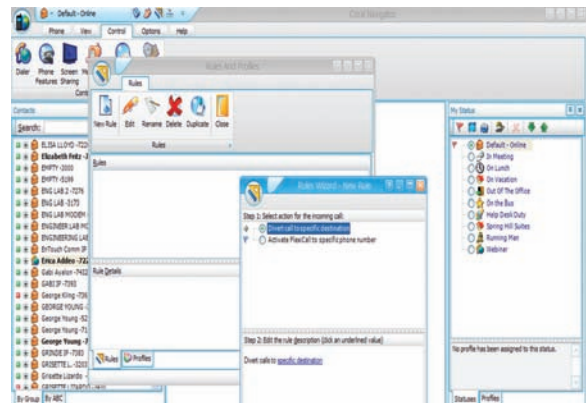

CORAL NAVIGATOR

Simple and Powerful Controls

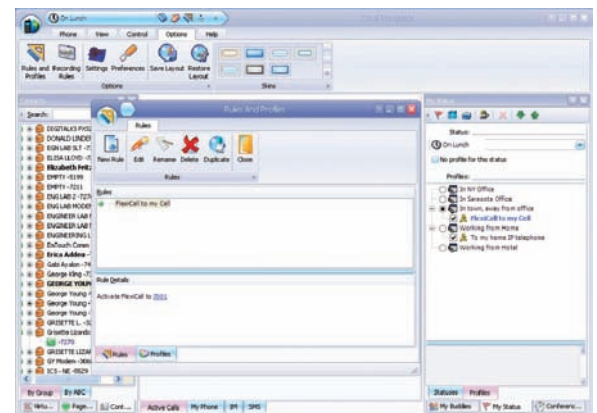

CALL LOG – A searchable history of call activities that features archiving of recorded phone conversations and rules for setting up automated recording. With one click a user can play a recording, attach it to an E-mail or archive it to a network drive.

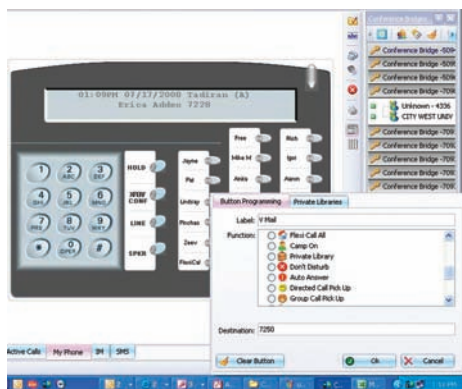

PERSONAL CALL RULES – Uses Outlook®-like rules to determine the handling of in-bound callers. Route calls to other extensions or FlexiCall numbers based on time, date, Caller ID etc. Set rules to automatically record a specific caller in the call log. Assign several rules to one Profile such as “Working from Remote location” to easily activate multiple rules at once.

PROFILES AND STATUS – Set up personal “Profiles” (such as “In town, away from office”) that incorporate Rules to deliver calls when/where/how you prefer them: These Profiles can be activated by your Status. Everyone on the system has the same Status choices (usually – Default, In a Meeting, On Lunch, On Vacation, Away from Office, etc.) Simply click on your status before you leave your desk and others will visually see it, and

your calls will be routed based on the Profile that you have attached to that Status.

BUTTON PROGRAMMING – Simplifies the customization of the programmable buttons on your Tadiran desk set. Set up desired features and labels based on your individual needs using simple menus.
